GETPW(III)   **GETPW(III)**

NAME
        getpw − get name from UID

SYNOPSIS
        getpw(uid, buf)
        char *buf;

DESCRIPTION
        Getpw searches the password file for the (numerical) *uid*, and fills in *buf* with the corresponding
        line; it returns non-zero if *uid* could not be found. The line is null-terminated.

FILES
        /etc/passwd

SEE ALSO
        passwd (V)

DIAGNOSTICS
        non-zero return on error.
